

Scientific Values Panel

Felipe Menanteau (*he/him*)
for the EDI Committee

Scientific Values and Vision Statement

- We are following in the footsteps of our work in the Collaboration Values
- Reflects the core scientific principles of our collaboration
- Opportunity to model the kind of collaboration we want to become
- Will not be policy, but guide collaboration policy and activities
- Motivate and prioritize recommendations and changes to policy

Scope

- Our final values statement will include both our social and scientific values
 - The social values have been ratified by the CMB-S4 Governing Board.
 - Now is time to focus on scientific values and vision to complete the process.
- Process is almost as important as the result.
- Values are big umbrella ideas that many things fall under
- Values don't have to be things that we feel like we are achieving now→ they can be what we want to achieve
- We want to provide resources and support to uphold these values and have strong accountability
- **Opportunity to model the kind of collaboration we want to become**

Panel Introduction

- Kevin Huffenberger (spokesperson)
- Jeff McMahon (spokesperson)
- Felipe Menanteau (EDI)
- YOU!

We thank our panelists for their willingness to engage!

Scientific Values Draft Statement

- Accountability
- Critical Thinking
- Fairness
- Integrity (combined with and ratified in social values)
- Stewardship

[Draft of the scientific values draft is open to feedback](#)

- Includes short definitions and lists of behaviors that exemplify those values
- Commenting is open now!
